

Assessment of office computers belonging to Y.E.S as of 07/29/08

Steven F Constine

Attached you will find an inventory of all CPU.s, printers, Monitors and Laptop that are in the office. The first inventory was done by James and updated by myself on 07/28/08. Also attached are photos of this equipment taken also on 07/28/08.

My concern in checking all of this equipment was to date it and to it's use fullness. The four desktop CPU's date from around the year 2000, and three of the monitors are also from around 2000. One flat screen monitor is from around 2004. The HP laptop is from 1999-2000, the HP ink-jet printer is close to 6-8 years old, there is a newer Samsung laser printer Bk/wt only that is near 4 years old. Key boards, mice are all a mix match of varying ages.

The software that came on these units was Windows ME 2000. Newer software has been added to some so they we may continue to use them.

In my experience from years of utilizing computer technology in my department is that NO computers or computer technology has been purchased in the last 6 years or more. This report is a summary of all the resources contained in the old YES office located on 14 Tri-Park Way. All of the useful computers and computer technology was transferred to the new office 5713 Suit E on Grandmarket Dr.
